The Document Challenge

Every Organisation Runs on Documents

Contracts, policies, proposals, reports, compliance records, procurement agreements, SOPs, and operational documents drive critical business decisions.

1. Time-Intensive Reviews

Teams spend hours manually reviewing documents and extracting key information.

2. Information Hidden in Large Files

Finding specific clauses, obligations, deadlines, or critical insights often requires searching through hundreds of pages.

3. Risks Go Unnoticed

Important terms, compliance gaps, and hidden liabilities can be missed during manual review.

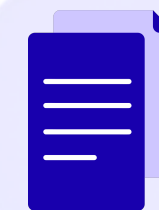

4. Inconsistent Documentation

Different teams create documents differently, resulting in errors and inefficiencies.

5. Version Control Challenges

Understanding what changed between document versions is difficult and time-consuming.

6. Growing Workloads

Document volumes continue increasing while teams are expected to do more with the same resources.

How Obligo AI Solves It

COMMON DOCUMENT PAIN POINT

THE OBLIGO AI SOLUTION

 **Time-Intensive Reviews**

→  **Accelerated Reviews:** Cuts cycles from hours to minutes.

 **Hidden Information in Files**

→  **Instant Retrieval:** Natural language search surfaces exact clauses instantly.

 **Risks Go Unnoticed**

→  **Proactive Risk Detection:** Automatically flags critical terms & gaps.

 **Inconsistent Documentation**

→  **Standardized Drafting:** Approved templates ensure same standards.

 **Version Control Issues**

→  **Clear Change Visibility:** Semantic comparison shows meaning-based shifts.

→ Every challenge organizations face with documents has a direct, AI-powered solution built into Obligo AI.

Obligo AI Features

Risk Analyzer

Reviews clauses using predefined risk templates and compliance frameworks to spot exposures.

Clause Comparison

Compares document versions at the semantic level to catch critical meaning-based changes.

Text Lens

Performs meticulous word-by-word comparisons to map edits, deletions, and additions.

Insights (Q&A)

Ask questions in natural language and receive context-aware, accurate answers instantly.

Smart Drafter

Create legal & corporate documents utilizing existing vetted templates and smart guided AI.

AI Summarizer

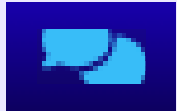

Transforms complex, multi-page files into brief summaries with multi-level detail parameters.

Knowledge Base

Store policies, past contracts, and legal guidelines in a centralized repository to enable context-aware, organization-specific context during drafting document analysis and risk review.

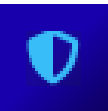

→ **Reduce review time, improve consistency, enhance compliance, and make better decisions faster.**

Obligo AI Integrations & Modules

Workflow Module

Manage your contract lifecycle—from creation and review to approvals, execution, renewals, and archival—through intelligent workflow automation.

Document Management System (DMS)

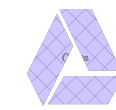

Securely organize, version, search, and retrieve documents from a centralised repository with complete visibility and control.

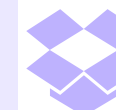

LegAlcy

LegAlcy AI integrates with Obligo AI to provide AI-powered legal workflow automation, including document intelligence, court order scheduling, document classification, case analysis, and transcription.

ENTERPRISE CLOUD CONNECTIONS

DocuSign

➔ A fully connected platform combining document intelligence, workflow automation, and unified operations.

OBLIGO AI vs CHATGPT / GEMINI

Enterprise Document Intelligence & Legal Workflows vs. General-Purpose AI Chat

Comparison Area	ChatGPT / Gemini	Obligo AI
Domain Focus	General-purpose; built for broad conversation; requires manual prompting; not optimized for legal/document workflows.	✓ Purpose-built workflows for contracts, policies & compliance — summarization, clause comparison, drafting, risk analysis, cited Q&A.
Knowledge Base	Works on uploaded files temporarily; little to no persistent organization-specific memory.	✓ Persistent enterprise knowledge base built from historical contracts, policies, SOPs & past agreements — reusable across every workflow.
Traceability	Responses don't always include precise sourcing; hallucination and auditability concerns.	✓ Q&A with page references — every insight is source-backed and traceable to the original document.
Risk Scoring	Generic risk interpretation; no structured legal risk framework out of the box.	✓ Dedicated risk-scoring engine detects missing clauses, deviations, high-risk language & compliance gaps.
Semantic Comparison	Can compare text only if manually prompted; no structured legal-diff intelligence.	✓ Side-by-side semantic & word-level comparison with meaning-based deviation detection for negotiation support.
Drafting	Generic drafting support with no enterprise template governance.	✓ Smart drafting assistant using organization-approved templates and historical knowledge.
Workflow Integration	Primarily a chat interface; requires manual operational adaptation.	✓ Built around the enterprise document lifecycle — focused, repeatable operational workflows.
Security & Governance	Standard consumer-grade access controls.	✓ Private deployments, tenant isolation, controlled access & enterprise permission governance.
